

Accessibility within a community relates to providing equal access for all residents regardless of age, economic status, or physical/mental ability.

While providing physical access to buildings and destinations by installing ramps, wider entryways for wheelchairs, and designated pathways are important for accessibility, a community must use a broader idea of accessibility to be successful.

To tackle accessibility successfully, a community must consider access to amenities and services, other modes of transportation beyond a car (active transportation), location of amenities and services, the types of amenities and services, and the digital divide.

What are our community's strengths and weaknesses regarding accessibility? What policies need to be implemented to improve accessibility? What physical improvements need to be made?
