

Sustainability is the wise use of resources that allow communities to meet their current needs while having resources to meet the needs of generations to come. While it is often referenced when discussing environmental or natural resources, it can also refer to cultural and economic resources.

When thinking about how we as a community grow and develop, it is important to consider how we will grow sustainably to meet the needs of future generations.

What resources should be considered when making recommendations about growth and development? What methods should be used to manage and preserve our resources? What policies need to be established?
